

> DEFORM IN IMPORTANT COLLABORATION WITH PSV

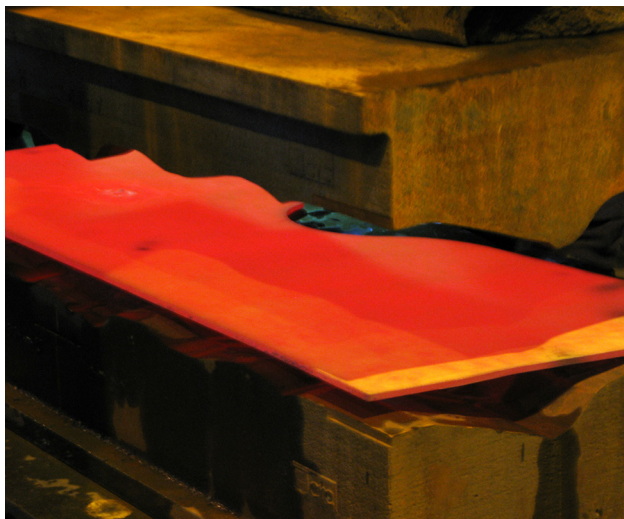

PSV is one of the leading manufacturers of vehicle protection.

Deform is now series producing a firewall for the German company, PSV (Project Support Vehicles). Used in Toyota Land Cruisers all around the world, the firewall is hot formed, quenched and tempered in a single piece. The material is 10 mm armour steel (Brinell hardness 600). To save weight and money while also providing better ballistic protection, the customer avoids welds.

The firewall is only one of many hot-formed quenched and tempered products from Deform. Customers are many and the potential is enormous. Owing to the improved protection (with reduced weight and cost), this is Deform's fastest growing segment.

Hot forming of armour plating.

Three-dimensional waterjet cutting.

Delivered firewall in front of a Land Cruiser at PSV.
