

> DEFORM SUPPLIES PROTECTION MODULES FOR TRUCKS

Åkers Krutbruk Protection AB is a Swedish company that is part of IBD Deisenroth Engineering, a German group that is a world leader in survivability systems.

Åkers specialises in protection for vehicles. In this connection, Deform has supplied formed protection modules that are complete and ready for immediate fitting to trucks. Such deliveries are an example of how Deform can take total responsibility and serve as a system supplier. For Åkers, we performed all steps needed, and assembled the complete modules, before putting them into customer-tailored packaging. In this way we can widen our responsibilities and reduce the number of contact interfaces for our customers.

Deform's special expertise makes it possible to hot form a plate and then restore the steel's properties without the product losing its shape. Here, we processed plates with hardnesses equivalent to 500 HB and 600 HB.
