Mobile explosion containment vessels

The complete mobile explosion containment vessel.

For more information about Dynasafe AB call +46 586 771270 or look at www.dynasafe.com

locked in order to create a unit protecting from any explosion. In purpose to achieve a maximal security the entire operation, opening, loading, closing and locking, is operated from a remote-controlled unit on a safe distance. The unit is built on a 4-wheeled trailer that easily can be pulled by a suitable vehicle and it should manage explosive effect up to 5 kg trotyl. Because of the unique design the equipment can be used several times.

Dynasafe AB:s activities consists of development, construction and selling of security products for handling , transportation and destruction of explosive objects. After September 11, 2001 Dynasafe AB has noticed a strongly increased interest for their products used on airports, by the police or other special units. The possibility to modify the products for each customers special need is one of the reasons to the companies success during the last years.

One of Dynasafe AB:s products is a mobile explosion containment vessel primarily used for secure containment and

transportation of explosive objects for safe destruction. The equipment is formed as two half spheres that can be closed and

To this mobile explosion containment vessel Deform delivers half spheres in steel grade Weldox 900E, hot formed, quenched and tempered in one piece. We also produce and weld on the flange units together with the locking rings. The high security demands brings considerable testing and Deform has to deliver absolutely perfect products considering the application area. Due to very short delivery times Deform holds a constant stand-by for this product.

Special plates for the battle tank "Leopard"

Since eight years Deform delivers armour plates to Blohm & Voss Industrietechnik GmbH in Hamburg. The hot formed quenched and tempered plates in different profiles are parts of the tank "Leopard" previously delivered to the Swedish army and now also to the Spanish defence.

Deform has the competence of controlling the complicated forming process where after the hot forming the properties of the steel grade must be restored. The importance of the materials strength hardly needs to emphasize.

Battle tank "Leopard".

Mr Siekmann, Deforms contact person at Blohm+Voss Industrietechnik GmbH, praises Deform for its quality- and delivery security: "Deform is a very important

supplier and partner that we can rely upon". Deform has been tested and improved as supplier of the German authority "Bundesamt für Wehrtechnik

und Beschaffung" An approval that we are very proud to have.
