

> HEAVY FABRICATION

In our local Nordic markets, heavy fabrication make up a very important segment for Deform.

Our customers sometimes need rapid help with cutting, straightening, pressing, roller bending and welding. Our closeness to the market, our press capacity and our experience of heavy, complex plate working make us the natural partner.

We often assist in developing solutions for technical problems. Indeed, after close discussions with customers, it is not at all unusual for us to come up with manufacturing solutions. Our design capacity and production expertise are important parts of our offerings!
