

## > DEFORM AB

Deform's history stretches back over more than 100 years. This has given us strong traditions, expertise and pride. We know our industry and what it takes to form plates of differing degrees of complexity in various metals, grades and thicknesses. With Deform as a partner, you can relax!

Today, Deform is a modern, independent company with high ambitions. We want to challenge ourselves and focus our sales and manufacturing on advanced forming. Consequently, we are keen to have like-minded customers who are at the cutting edges of their industries. Customers who know that whenever a product needs to be formed to the most demanding of specifications, Deform is the obvious choice!

Currently, we export over 70% of our production and see this as proof that we are competitive all around the world. However, not satisfied with this, we have a goal of continued strong growth within selected segments.

Deform beautifully situated next to the nature reserve Sveafallen.

Deform provides manufacturing services such as cutting, pressing, straightening, plate working and welding for a wide range of customers within heavy industries.

Deform hot forms and quenches and tempers armour plate. This is a fire-wall for the Toyota LC200.

Deform manufactures all the formed parts of pressure vessels. The picture below is a complete pulp digester delivered to a customer in South Africa.

Deform hot forms high-strength quenched and tempered steel for mining, construction and other heavy equipment. We supplied formed wear resistant plates to Boliden for their P&H machines.
