

> PARTS FOR PRESSURE VESSELS

Pressure vessel manufacturers worldwide represent a highly important business segment for Deform. Various applications in the petrochemical, nuclear power, non-nuclear power, chemical, pulp and submarine industries are amongst those for which our customers supply complete pressure vessels.

Deform can supply both individual components and complete constructions kits. If requested, we also offer welding. To optimise construction (number of segments, arrangement, etc.) and minimise welding and plate consumption, we are always happy to be involved at an early stage of the design phase.

We are receptive and flexible. We understand our customers' requirements, wishes and possibilities. Previously, we were ourselves manufacturers of complete vessels.

Our projects included pressure vessels for the expansion of Sweden's nuclear power industry – a guarantee of our know-how and experience!

Our expertise covers hot and cold forming, heat treatment, cutting, heavy plate working and welding – everything required for simple final assembly.

Formed segments welded together to make a complete sphere. Fitting and quality is an absolute requirement. Sphere in the picture is nearly 26 meters in diameter
