

> WELDING AN IMPORTANT ADDED VALUE

Deform has for many years been a recognized skilled welding supplier.

We have extensive experience, and may include referring to the period when we were involved in building the Swedish and some other European nuclear industry. At that time we made complete welded pressure vessels and now we are a complementary welding partner to various customers in all our business areas.

We have long been certified according to ISO 3834-2. This means that we have an approved quality assurance for fusion welding of metallic materials. Level 2 means we have been approved for the most extensive requirements!

We master most welding processes and have a SAW-crane, several SAW-tractors, a rail track system, positioners and several manual stations.

Relevant welding procedures and a lot of weld test samples are in place. We have great experience in heat treatment, testing, third party verification and documentation.

We are welcoming your inquiry!

Deform have many skilled welders and our own IWE (International Welding Engineer).

Deform has a long reference list with satisfied customers. Thick, tough, demanding materials and high end welding is our specialty.
