

## > AN EXPERIENCED SPHERE MANUFACTURER

Deform has long experience of sphere prefabrication. We optimize the size of each segment and manufacture in exact accordance with customer wishes.

The controlling factors are the weight of each segment, available plate formats, available press force, any hot forming requirements, any special wishes regarding welds and welded on flanges (necks) etc.

The guiding principle is always to find solutions that make our customers' final assembly smooth and entails the lowest total landed costs throughout the supply chain.

Each sphere is unique. Furthermore, with over 150 spheres supplied all around the world, we can proudly state that we have all the necessary experience!

▲ Example of Deform spheres in different phases. Preassembly of the sphere can in some cases be made complete or in part. The goal is always fast and easy final assembly at customer site!

▲ Segments welded together to form a complete sphere. Fit and quality is an absolute requirement. The Deform sphere in above is nearly 26 meters in diameter!
